## Future Science Gateways

I am fairly new to science gateways. I was introduced to science gateways through the Science Gateways Community Institute 4-Week coding institute. Through this institute I have learned a lot about science gateways. My definition of science gateways are portals and virtual research environments. Science gateways have many uses including gateway interfaces to be used educational tools, computational tools, and data analysis. I plan on using Science Gateways for my future research projects. If possible, I would like to continue working on science gateways next summer as an intern under Rajesh Kalyanam. Rajesh Kalyanam was my mentor during the Science Gateways Community Institute hackathon. I found Rajesh to be a very knowledgeable and helpful mentor. The project I worked on was interesting because I used Twitter to collect all of the data for the gateway. I plan on continuing working on this project throughout the year under his mentorship. Science gateways are unique, a very useful skill to know. I look forward to working on gateways in the future, and possible find a career working with science gateways.
