My name is Solomon Gebrhana. I am a sophomore majoring in computer sciences at Mississippi Valley State University (MVSU). I am originally from Ethiopia before I came to the USA. I attended high school in my home town Addis Ababa, Ethiopia. In high school I was always interested in coding and tech stuffs. Even though I wasn't the best at coding I really tried my best to improve myself in that area.

And after high school I went to a Bahir Dar University which is located in city of Bahir Dar, the capital of the Amhara National Regional State in Ethiopia. Back there I was studying industrial engineering. And in 2016 I got the chance to come to the United States of America. I didn't stare my school right away because of absence of some documents. After some time I got accepted to attend MVSU.

At first I was trying to continue with my industrial engineering but they didn't have that. So I choose computer science. Like I said I was interested in coding so I was excited. But collage was really different from back home. I didn't know that many people, I was struggling to understand people (the way they talk was different), even the time was different from back home. So I had to adjust a lot. Getting used to this new system wasn't easy. My first semester at MVSU was pretty good I have a 3.5 GPA and I was honor scholar for the fall of 2017. My second semester wasn't as good I was really struggling with working at night and going to school during the day time. I want as focused as I was supposed to be so my GPA went down. I have some experience with some C ++ and Raptor. Currently I am doing an internship in Science and Gateways Community Institute at Elizabeth City State University.

After I get my Bachelor's degree in computer science, I am planning to pursuit my masters and doctorate in this same filed. My first priority is to make myself better in all ways possible. One last thing I have to say about me is that I am NOT the best but I will definitely try my BEST to get where I want.
