My Future in Science Gateways

As the time draws closer and close to my departure from SGCI-4 week coding institute I feel myself getting more and more excited to present the project I was given with my team. Through this institute, I not only had the opportunity to engage myself with a whole new educational environment. But alongside that, I was able to use the skills I learned throughout the coding program to reconstruction a whole new way of practicing and captivating myself to trying a new field of study. Because of Science Gateways, I am here at this moment writing about my experience here at Elizabeth City State University. I am now able to use the skills taught to me through this program such as HTML, JavaScript, Python, Jupyter Notebook, GitLab, and much more. I know am able to teach others even if it's just the basics of what I know. In the near future, I do want to continue working with Science Gateways and embrace more skills sets revolving around coding skills I gained in ECSU. I am extremely grateful for this program and my amazing mentor Tangee Beverly for being by my side and guiding me through the many exercises given to me. I am extremely grateful for Science Gateways for allowing me to participate in this program. I believe that this program was able to construct a positive impact on my road to success and look forward to working with Science Gateways again and being able to build my career path with Science Gateways.
