

Your name: Daniel Lamb

Your institution: Elizabeth City State University

Please insert a photo of yourself (preferably in action during your internship, but not required)

1. Tell us a little bit about yourself, including what you are studying.
I am an incoming freshman attending Elizabeth City State University. I am majoring in computer science. I enjoy running and spending time with friends and family.
2. Where did your internship take place, and who did you work with?
My internship with SGCI took place virtually under the supervision of Dr. Hayden and Elizabeth City State University.
3. What are some things that you learned as a result of this internship?
This is where I was introduced and began training in programs such as Unix shell, Python, Github and Hubzero and many helpful tools. I had no prior knowledge of these programs.
4. Do you see yourself engaging with SGCI again in the future? Perhaps when you begin your career?
Yes, I would like to be involved with SGCI's program next summer or intern at a facility that they partner with. I could see myself beginning my career with SGCI.
5. Anything else to add about your internship experience?
This internship helped me experience hands-on learning that let me dive deeper into the field of computer science. It provided me with learning that many of my classmates may not be familiar with. It provided me with resources that I can practice and learn before I even begin my studies.
