

Your name: Najm Mohamed

Your institution: Winston-Salem State University

Please insert a photo of yourself (preferably in action during your internship, but not required)

1. Tell us a little bit about yourself, including what you are studying.

I am a rising Junior at Winston-Salem State University and I will be obtaining a Bachelor of Science in Computer Science. I'm currently studying Computer Science with a focus on front-end development as that's what I'm passionate about pursuing in my career.

2. Where did your internship take place, and who did you work with?

My internship took place virtually due to COVID-19, we still found a way to make it work and learn new concepts as if it was in person. Thanks to an amazing staff that made it work such as Dr. Hayden, Jeff Wood, La'Andrea Gates, Elliot Foust, Agbeli Ameko, and my SGCI colleague.

3. What are some things that you learned as a result of this internship?

We learn HTML and python also how to use a terminal and create a virtual system. We also focused heavily on supercomputing and how it's being used to treat world problems like COVID-19 and global warming.

4. Do you see yourself engaging with SGCI again in the future? Perhaps when you begin your career?

Absolutely! Loved this experience and definitely will return next year.

5. Anything else to add about your internship experience?

Being apart of the SGCI internship far exceeded my expectations. I have learned a lot and I greatly appreciate the staff and the people that worked with us for this great opportunity.
