

Your name: William Clark

Your institution: Dixie State University

1. Tell us a little bit about yourself, including what you are studying.  
I am currently an undergraduate at Dixie State University, majoring in mathematics and minoring in American Sign Language. I have been married for two years and have an eight-month old daughter named Lucy who is my world. I am fluent in American Sign Language, love taking hikes and enjoy vacationing with my family.
2. Where did your internship take place, and who did you work with?  
Due to the Covid-19 pandemic, I participated in this internship at home, participating in group calls over zoom or working on my own at home. I worked for SIMIODE under the director Brian Winkel, with Anthony Stefan, a grad student in Florida.
3. What are some things that you learned as a result of this internship?  
I learned how much goes into planning and executing a mathematical competition, and how large the mathematical community is.
4. Do you see yourself engaging with SGCI again in the future? Perhaps when you begin your career?  
My career goal is to teach math at college level, so I can definitely see myself engaging with SGCI again, especially to help students realize what is out there for them.
5. Anything else to add about your internship experience?  
The internship has been very helpful to me learning, and has helped me dive further into the math community to better prepare me for my future.
