

Hello, my name is Lilshay Rogers and I am currently attending Elizabeth City State University located in the heart of Elizabeth City, North Carolina. I have recently graduated from I.C. Norcom High School. During my time there I was able to be apart of a variety of clubs such as robotics, cybersecurity, and the science, technology, engineering and mathematics club.

Originally, I fell in love with the concept of physics, however, that quickly changed after visiting a lecture series at Norfolk State University and learning of the various opportunities behind computer science. Entering in the field of computer science not only places me in one of the world's most demanding field of study, but it also grants me the chance to learn amazing things like programming languages, robotics, and software engineering.

To further assist me on the path to mastering computer science and math, I have recently been accepted into the Center of Excellence in Remote Sensing Education and Research (CERSER) program directed by Dr. Linda Hayden. Being a part of CERSER allows for undergraduates to conduct extensive research, the active participation in national conferences, and summer internships.

My goal is to graduate ECSU in a span of three years with a bachelor's degree, in both, computer science and mathematics. I also plan to further my schooling by pursuing my master's degree and doctorate's as well. Somewhere in the near future, I intend on applying my skills of science and technology to create modern day aircrafts.
