Professional statement

I am a recent honor's graduate from Fort Dorchester High School. I was an honor roll student who never got into trouble. I am looking to start my career field in software development. I am currently enrolled at Elizabeth City State University studying computer information and science with a concentration in data base science. I am looking to build my knowledge and experience in computer software engineering.

I am currently in the Center of Excellence in Remote Sensing Education and Research program. There I have taken classes on Unix Operating Systems, Macintosh Operating Systems, Python Programming Language, GitHub, Jupyter Notebook, and HTML JavaScript. I eventually used those skills to participate at the 2019 Super Computing conference. There I participated in a Hackathon, where I and 3 other people worked on a program that organized a ton of information into different graphs. The user could then import the file they wanted to organize and then the python program will organize that information into different graphs of different variables. It was a learning experience for me because I learned more about the Cloudy Cluster platform. I also experienced what programmers experience when they have to create a project within a given short amount of time.

In the future I would like to become one of the best programmers in the industry. I also look forward to obtaining my masters in computer information and sciences. I also have a desire to work for different companies and learn as much as I can from each to then start my own programming firm.
